ALZU BROILER FEEDS

ALZU manufacture Broiler feeds for optimum production. ALZU formulates to the ideal protein concept and nutrient optimum for maximum cost effectiveness and optimum feed efficiency. The feeds are in line with the latest research and breed recommendations. ALZU Broiler feeds are formulated to minimize feed costs and to optimise production.

ALZU feeds are based on sound scientific principles including optimum nutrient designs and the ideal protein approach. There are different feed programs with different phases, due to the different requirements during the various growth stages. A two phase feed program includes Broiler Starter and Grower. The more phases are fed, the more economic the growth, but the management must be very good.

BROILER FEED SPECIFICATIONS:

Description ALZU Code	STARTER BA220	GROWER BG200	POST FINISHER BF160	MAINTENANCE BO140
Protein (g/kg min)	220	200	160	140
Methionine (g/kg min)	4.4	2.3	2.4	2.4
Lysine (g/kg min)	11	9.5	9.5	6
Moisture (g/kg max)	120	120	120	120
Fat (g/kg min)	25	25	25	25
Fibre (g/kg max)	50	50	50	50
Calcium (g/kg min)	8	7	7	7
Calcium (g/kg max)	12	12	12	12
Phosphorous (g/kg min)	7	6	6	6
Salt (g/kg max)	5	5	5	12

ALZU GUIDELINES FOR FEEDING PROGRAMS

	BA220 (STARTER)	BG200 (GROWER)	BF160 (FINISHER)	BO140 (MAINTENANCE)
2 PHASE	0-21 DAYS 1000g Feed	22 DAYS - Slaughter 2500g Feed		36 DAYS - Slaughter FEED ad lib
3 PHASE	0-21 DAYS Feed 1 kg	21-32 DAYS Feed 1.2 kg	FINISHER 32-36 DAYS Feed 1.3 kg	36 DAYS - Slaughter FEED ad lib = 3.5 kg

ALZU BROILER STARTER BA220 Reg. No: V11197 Act 36 of 1947

This ration has a high protein (amino-acid requirement) level. Included in the ration is a coccidiostat for prophylactic coccidiosis control and a growth promoter as an extra aid in bird performance. To obtain maximum benefit it should be noted that this ration must be fed to appetite (ad libitum)

All nutritional requirements for the birds (chicks) at this vital stage have been carefully formulated.

ALZU BROILER GROWER BG200 Reg. No: V11196 Act 36 of 1947

It is mostly used in a pellet form but is often fed in the meal form to minimize the effect of ascites. This ration contains a coccidiostat and a growth promoter. This ration should be fed to appetite (ad lib). If this ration is fed to slaughter, the coccidiostat, growth promoter etc, must be removed from this ration in the last 4-5 days prior to slaughter

ALZU BROILER FINISHER BF160 Reg. No: V18692 Act 36 of 1947

The feed is normally fed in the pellet form. As with all the other rations, this ration is fed to appetite. No coccidiostat and growth promoter is added.

ALZU BROILER MAINTENANCE BO140 Reg. No: V11530 Act 36 of 1947

This is a complete feed for broilers from 40 days until slaughter. This ration will keep the mass of the chickens constant and save costs.

ALZU BROILER CONCENTRATES

These concentrates have been developed so that the final mixtures consists of the correct levels of energy, amino acid, vitamins and minerals. The feeding instructions are as per the ready mixed feeds.

ALZU BROILER STARTER CONCENTRATE BAK Reg. No: V12104 Act 36 of 1947

CONCENTRATE SPECIFICATIONS:

Protein	400 (g/kg min)
Methionine	11 (g/kg min)
Lysine	27 (g/kg min)
Moisture	120 (g/kg min)
Fat	30 (g/kg min)
Fibre	60 (g/kg max)
Calcium	20 (g/kg min) / 30 (g/kg max)
Phosphorous	12 (g/kg min)
Salt	6 (g/kg max)

MIXING RATION

Concentrate	400 Kg
Yellow Maize	600 Kg
Total:	1000 Kg
Specifications same as BA 220	

ALZU BROILER GROWER CONCENTRATE BGK Reg. No: V12105 Act 36 of 1947

CONCENTRATE SPECIFICATIONS:

Protein	400 (g/kg min)
Methionine	8 (g/kg min)
Lysine	24 (g/kg min)
Moisture	120 (g/kg min)
Fat	40 (g/kg min)
Fibre	100 (g/kg max)
Calcium	20 (g/kg min) / 24 (g/kg max)
Phosphorous	7 (g/kg min)
Salt	5 (g/kg max)

MIXING RATION

Concentrate	300 Kg
Yellow Maize	700 Kg
Total:	1000 Kg
Specifications same as BG 200
